

**THE WORLDWIDE
DIVING STANDARD**

VIKING™ DIVERS DRESS

Viking DIVERS DRESS

The Viking DIVERS DRESS is based on the Viking HD, and is manufactured with a touch of nostalgia for those divers who continue to dive using traditional helmets like the Siebe Gorman 12 bolt. Built to replace the old canvas coated rubber suits, in a style more suited to 21st century demands for diving in water which may be contaminated.

- Internal stitched and taped seams
- External vulcanised seams
- Easy to clean exterior when contaminated
- Easy to repair in the field to minimise downtime
- Flexible and comfortable
- Most popular rubber collars available

SUIT MATERIAL

The Viking DD material is a blend of natural and synthetic rubbers (NR/EPDM), on a 2-way stretch knitted polyester lining.

Total material weight is 1550 g/m² ± 100 g/m².

SEAMS

Internal seams are stitched together with an elastic tape for security. External seams are vulcanized with a 25 mm rubber tape. Vulcanizing is a chemical bonding process, ensuring watertight seams.

COLOR

Red with black reinforcements, or all black.

SIZE RANGE

01/MED, 02/LGE, 03/EXL, 04/XXL

See the Viking size chart for detailed size measurements along with boot sizing.

Vulcanized rubber suits are not custom built due to dependency of aluminum mannequins for vulcanization. Extension and shortening of arm and leg length is possible and offered separately.

Internal stitched seam

REINFORCEMENTS

Additional layers of anti slip textured rubber are applied to areas at risk of wear. The front of the legs from above the knee, down to the boots, and around the boots are also protected from abrasion and puncturing.

ZIPPER

None fitted. Entry is through the shoulder and collar.

VALVES

Not required. All air related functions are handled through helmet controls.

RUBBER COLLAR

The chosen rubber collar is first of all mounted onto the DIVERS DRESS material, and then attached to the suit by stitching, taping and eventual vulcanization. A drip collar made from soft material is also mounted inside the rubber collar.

CUFFS

Latex HD cuffs are the standard fitment. Alternatively the suit can be fitted with a rubber cuff ring system, which makes the fitment of latex or rubber mittens or latex gloves possible.

FOOTWEAR

The standard boots are an extension of the leg, and formed over a metal foot former to provide the shape. Additional layers of textured rubber are added for durability. There is no additional outsole fitted to the DIVERS DRESS boots in order that they may be used in conjunction with heavy overboots. Alternative boot options are available.

INCLUDED WITH EACH DELIVERY

Each suit comes supplied with suspenders, carry bag, user manual, repair kit and zip care materials.
